STUDIA INFORMATICA UNIVERSALIS is a publication of the Editions HERMANN. It aims to be an international journal on computer science. The primary purpose of the journal is to present original research findings, new methods, and surveys of recent developments in various fields of computer science. There is no restriction on the addressed topics, the criterion for publication is the originality and quality of the submission.

All papers will be refereed. Survey articles of high quality are also encouraged as contribution to recent emerging fields.
